

Lilium ATM project Simple ATM software

ellipsiis

25 August 2021

This project is concibed to generate experience in C# form begining. Of course, this project in first version 'll be a console project and next version I'll implement and GUI for controlling the software.

Requirements

1. You can create an credit/debit card.
2. Checking wheter an input - such as an ATM card (a debit/credit card number) - is recorder correctly.
3. Verifying the user by asking for NIP.
4. In case of negativate verification, loggin out the user.
5. In case of positive verification, showing multiple options, including cash availability, the previous five transactions, and cash withdrawal.
6. Giving the user the ability to withdraw up to \$1,000 worth of cash in one transaction, with total transactions limited per day.
7. User'll can change a NIP (register new NIP).
8. User'll can change their mobile number.
9. Show a complete bank statement.
10. Posibility of fast withdrawal system to \$100, \$50 or \$20.
